

LunchBox

Face audits with... confidence.

LunchBox Free & Reduced fully automates all aspects of free and reduced meal application processing and ensures compliance with state and federal guidelines.

Face audits with the confidence that comes from knowing that current and historical meal statuses are accurate and that your district is in compliance with government guidelines for eligibility and verification. Real time update of meal status at the POS assures accuracy and maximizes revenue. For the utmost in accountability, LunchBox maintains a complete history of student status changes, detailing when changes were made, what the changes were, who made them and the reason for the changes.

Special shortcuts and built-in quick entry techniques speed up application data entry at the central office. For even faster processing, applications can be scanned or entered by the student's family on-line.

Free & Reduced easily imports government-provided direct certification data for automatic approval. Migrant, Homeless and Runaway participants are readily identified for quick qualification and reporting.

A full complement of standardized reports is loaded with the Free & Reduced module. You can also use specific search fields for extracting free and reduced data that you need. Parents are notified of changes to meal status or requests for verification with customizable form letters that you can mail or individually attach to an email for quick notification. You can generate custom form letters for temporary status expiration, approval, adverse action and to meet other notification needs. These letters may also be bilingual.

Deadlines are managed for you. The verification process is completely automated. Applications are stored in the LunchBox database so that applicant information is confirmed and questions are answered without delay. Application data and meal status "follow" students who transfer within the district so participant data is always accessible.
