

# LunchBox

## What has technology done for you today?

LunchBox Site Manager Suite has everything you need for a food service operation that exceeds expectations...

Consolidation of district-wide information is a primary function of Site Manager, whether purchased as a Suite or not. The district-wide reach of LunchBox Site Manager minimizes travel and phone calls so that you and your cafeteria staffs can be more productive. How? **By giving you direct, immediate access to all of the data district-wide that you need to file your monthly claim report and to most effectively manage your food service operation – from your computer.** Need more control over your cafeteria operations? With Site Manager's real-time web-based foundation, meal and a la carte pricing, school site data gathering and consolidated reporting are all automated and controlled by you. Participant roll-over at year-end is processed and managed by you. Information from the schools about attendance, deposits and insufficient funds checks is delivered to you daily.

You don't have to wait for overnight data transfer. Once the school's end-of-day processing is complete the manager's report data is automatically added to the district's totals *in real time* for you to view and access. Built-in checks and balances pinpoint errors so you can quickly correct them at your computer each day with no month-end backlog to slow you down. You can view individual school site data as well as district-wide aggregates anytime. Your claim report is submitted sooner and payment turnaround is faster!

Via the internet, **LunchView** gives your parents access to the student's current account balance for viewing and supplementing; provides access to the student's eating history for viewing and printing; and lets parents set spending limits on a la carte purchases.

**LunchView** is free with your purchase of Site Manager.

### Site Manager brings to your operation...

- Site Manager is a potent tool that gives you real-time access to information at the POS and in the cafeteria Back Office without interrupting the manager, cashier or serving line. From your computer, you can see what your managers and cashiers see!
- Site Manager brings you the option of no-touch, auto-deployment of LunchBox software updates with no human intervention required.
- Revenue and participation statistics by school and in total are readily accessed to help you make critical decisions.
- User-defined site groups let you analyze reimbursement comparisons between sites to help you better manage participation.
- Site Manager's open architecture lets you import and export data elements from and to third party sources such as your student information system plus it can be automated.
- Site Manager includes a full complement of helpful reports, including participant lists (customized to show the data elements you want to view), student rosters, graduation/promotion reports and site change alerts.
- State reimbursement reports specific to your state can be generated with the click of your mouse for immediate submission at the end of the month.
